

ENGINEERED FIRE SUPPRESSION

ENGINEERED SYSTEMS

Fox Valley Fire & Safety will provide a specially designed Engineered Fire Suppression System to meet your needs. Our full time, CAD trained engineering staff is available to design and engineer your customized system. Once your system is installed, you can count on our factory-trained personnel to service, repair, maintain and inspect your system. Additionally, Fox Valley Fire & Safety offers you an insurance policy, which covers you in the event of an accidental discharge.

FM200 SYSTEMS

You have invested a great deal in your data and computer equipment. Your equipment is housed in a climate controlled, limited access, secure area of your facility. Your business relies on the equipment in this room; it cannot be compromised by heat, smoke, water or fire. Suddenly, something happens and a small fire breaks out. That's when the FM200 system activates and floods the area with an "agent" that extinguishes the fire without additional damage to the equipment in the room. Fox Valley Fire & Safety hopes this never happens to you. However, you want to be prepared in the event it does. You can rely on Fox Valley Fire & Safety to design, engineer, service, repair, maintain and inspect your FM200 fire suppression system. It's the best protection you can have for your data and computer equipment.

CLEAN AGENT SYSTEMS

A fire can always be extinguished. However, sometimes the act of extinguishing the fire can cause more damage to your assets than the fire itself. Fox Valley Fire & Safety offers a variety of Clean Agent systems to suppress a fire without causing additional damage. Whether you choose a Sapphire system or a CO2 system, your equipment will be free of contamination when a fire is extinguished. Fox Valley Fire & Safety will design a system to meet your specifications and then engineer, install, service, repair, maintain and inspect that system. Fox Valley Fire & Safety provides radio dispatched, 24/7 emergency service.

DRY CHEMICAL SYSTEMS

For your industrial needs, whether you require fire protection for a paint booth or flammable storage area, Fox Valley Fire & Safety can provide a dry chemical fire suppression system to protect that space. Fox Valley Fire & Safety will install a system designed to your specifications. Additionally, you can depend on Fox Valley Fire & Safety to service, repair, maintain and inspect any major manufacturer's dry chemical system. We provide emergency service 24 hours a day, 7 days a week.

FIRE DOOR TESTING

Are your fire doors being serviced and tested annually as required by Fire Code? Did you know fire doors prevent fires from spreading? To insure these important fire stops work properly when they are needed, our trained technicians will inspect and test them every year. Don't allow a small fire to get out of control.

VEHICLE FIRE SUPPRESSION SYSTEMS

When you have invested hundreds of thousands of dollars in a vehicle used to transport the public or heavy equipment at a construction site, it is important to protect passengers and the person operating that heavy equipment as well as your investment. When your vehicle is not working, you lose time and money.

As an authorized Amerex distributor, Fox Valley Fire & Safety can help you protect that investment by providing a specialized pre-engineered fire suppression system, which is installed within the vehicle. In the event of a fire, the fire is extinguished quickly to protect lives, minimize damage and downtime. Fox Valley Fire & Safety provides design, on-site installation, repair, recharge and inspection of the system and equipment. We are available when you need us, 7 days a week, 24 hours a day.

EXPERIENCED. KNOWLEDGEABLE. RELIABLE. COMPREHENSIVE. INNOVATIVE.
