

# SPRINKLER SERVICE

Emergency Service 24/7

## INSPECTIONS

Fire sprinkler systems save lives. It's a proven fact that in the event of a fire, a properly functioning sprinkler system can extinguish, contain, or slow the spread of a fire. It is important to maintain, service and inspect these systems on a regular basis in order to be sure they will work when needed.

Fox Valley Fire & Safety offers the code-required annual, semi-annual, quarterly or monthly inspections of your fire sprinkler systems regardless of the type of system at your facility. Wet, dry or a specialized system, Fox Valley Fire & Safety employs factory-trained technicians to inspect the system, exercise all valves and controls and test all associated devices. Additionally, we can coordinate simultaneous code-required inspection of your fire alarm and sprinkler systems.

## BACKFLOW TESTING

Sprinkler system Backflow Preventers are very important health and safety devices. These devices prevent the stagnant water in your sprinkler system, irrigation systems, ice machines or boiler from getting into your domestic water supply. Code requires annual inspection and service of these critical devices. Fox Valley Fire & Safety will dispatch a technician to complete this important work.

## SERVICE AND REPAIRS

Have you ever experienced a water leak at your home or within your facility caused by accidental damage or freezing temperatures? Water damage is messy and expensive. Fox Valley Fire & Safety can help prevent sprinkler problems by properly maintaining, servicing and inspecting your system.

When needed repairs are identified, they should be completed quickly to avoid the possibility of a system failure. Fox Valley Fire & Safety's technicians and pipe fitters provide quick and reliable repairs. Whether you require new sprinkler heads or valves to be replaced, our radio-dispatched technicians will provide timely service and repairs.

## FIRE PUMP TESTING

In the event of a fire, your sprinkler system relies on a steady supply of water to extinguish the fire. In a multi-story, high-rise or large building or if you have low water pressure you may have a Fire Pump incorporated into your sprinkler system.

In order to maintain proper pressure and water flow, Fire Code requires annual testing of fire pumps. This testing insures that in the event of a fire, the water supply in your building will support the sprinkler system and the fire can be extinguished. Our trained technicians can inspect, service, repair and maintain your fire pumps to assure they will function properly.

EXPERIENCED. KNOWLEDGEABLE. RELIABLE. COMPREHENSIVE. INNOVATIVE.
