NOTIFIER offers all the components required for design and installation of the Emergency Radio Communication Enhancement Systems (ERCES): signal boosters/bi-directional amplifiers (BDA), batteries and battery enclosures, donor antennas, Distributed Antenna Systems (DAS), coaxial cables, connectors and lightning arrestors, power dividers and hybrid couplers, design services and training.

**SIGNAL BOOSTERS / BI-DIRECTIONAL AMPLIFIERS (BDA)**

NOTIFIER Class B BDAs are high gain, high power band-selective signal boosters/bi-directional amplifiers that can be designed and customized to meet all public safety frequency band ranges. It is intended to provide reliable two-way radio signal coverage inside buildings, tunnels and other structures. The band selective design delivers a reliable performance in even the most challenging RF environments.

**Features & Benefits**

- All public safety frequency bands supported, various models available for:
  - UHF: NF-BDA400-1B, NF-BDA400-2B
  - VHF: NF-BDA150-1B
  - 800 MHz: NF-BDA800-1B
  - 700 MHz: NF-BDA700-1B
  - 700MHz and 800MHz: NF-BDA7800-2B

- UL, CSFM, NFPA, IFC compliance:
  - Does not require external DC power supplies, chargers or alarm interfaces or feeds.
  - Integrated dual power supply system with two independent AC circuit breakers.
  - Integrated battery charger function with built in intelligent battery monitoring and diagnostics with automatic load testing.
  - 24 hour battery backup with the standard battery backup package.
  - Ability to connect to NOTIFIER's SLC loop for monitoring of the BDA at the FACP.
  - Six alarm relay outputs for the supervised BDA monitoring Panel / Annunciator.
  - Dedicated supervised Annunciator to provide status on AC power, antenna, charger and low battery. Annunciator mounts in a standard electrical 2-gang box.
  - On board Diagnostics
  - Donor antenna line monitored for integrity.
  - Event history logging that can be exported.
  - Optional Auxiliary Alarm.
  - LCD displays BDA system status.

- High Reliability
  - Two high-efficiency power supplies are included for redundancy.
  - Each module has an internal microcontroller that continuously monitors its operation and measures the voltage, temperature, current, and other parameters.

- RF power overload and RF interference prevention.
- Oscillation Detection Circuit prevents amplifier feedback.
- Automatic Uplink Squelch: Completely eliminates uplink noise from the BDA eliminating risk of interrupting public safety radio network.

- Excellent RF Performance:
  - Band/Channel-Selective modules provide high rejection of unwanted, interfering signals. Multiple channels/bands are possible within the same amplifier.
  - High performance bandpass cavity-type duplexers minimize out of band interference.
  - High Gain of up to 92dB on both uplink and downlink.
  - High Power – capable of producing up to 32dBm of RF power.
  - High Linearity Amplifiers deliver signals with very low distortion and low IM products.
  - Highly Resilient to strong RF inputs – ensures optimal, inter-mod-free performance.
  - Reliable performance even in high RF environments with signals as strong as -20dBm.
  - Very low signal delay of <9us means no delay-produced RF distortion in the signal overlap areas.
  - Optimized not only for FM and phase 1 P25 but also for TDMA and phase 2 P25 modulations.
  - Adjustable RF gain on both LNA and ALC modules.
  - Adjustable maximum power level.
  - Multiple ALC/OLC circuits maintain the set power limit and prevent the power amplifier overload.
  - Built-in EOL resistors are selectable with the DIP-switch.

- Serviceability:
  - Modular Design with easy to swap and easy to test modules.
  - Each module has a status indication LED light for easy troubleshooting and status monitoring.
- Easy to use gain and power settings.
- LED indication of signal strength.
- Convenient quick-disconnect terminals.
- Easily accessible RF connectors.

1 Multiple channels can be combined within the 3MHz duplexer band-pass. Multiple bands can be combined in the same enclosure. Other channel bandwidths may be available, please inquire with your specific requirements.

2 Only use approved lead-acid batteries supplied by NOTIFIER along with the Signal Booster.

3 This system meets NFPA requirements for operation at -20 to 25°C / -4 to 77°F and at a relative humidity. However, the useful life of the system's standby batteries and the electronic components may be adversely affected by extreme temperature ranges and humidity. Therefore, it is recommended that this system and its peripherals be installed in an environment with a normal room temperature of 15-25°C / 60-77°F.
